

Lesson Overview

Before cleaning or maintaining a computer, you must know **what each tool is for**. Using the wrong tool can damage components, so TESDA emphasizes identifying and selecting the **proper tool for the proper job**.

The Essential Tools Brush

(Anti-Static Brush)

Function:

- Removes **dust and dirt** from components like fans, heat sinks, and motherboard surfaces.
- Safe for delicate parts because it does **not create static electricity**.

Used For:

- Keyboard cleaning
- Motherboard dust removal
- Fan blades

Blower / Compressed Air

Function:

- Blows out **loose dust** from hard-to-reach areas.
- Prevents overheating by cleaning air vents and heat sinks.

Used For:

- PSU vents
- Inside the CPU case
- GPU heatsink areas

TESDA Tip:

*Always hold the fan blades in place so they **don't spin too fast**, it can damage the bearings.*

Screwdriver (Usually Phillips #2)

Function:

- Used to **open and close the system unit** or remove components (HDD, SSD, RAM locks, expansion cards).
- A basic tool for assembling or disassembling a computer.

Used For:

- Removing side panel screws
- Installing storage devices
- Tightening cable management brackets

TESDA Reminder:

*Use the **correct size** to avoid damaging screw heads.*

Cleaning Cloth (Microfiber / Lint-Free Cloth) Function:

- Wipes surfaces clean without scratching.
- Used for monitors, casing, and external parts.

Used For:

- Monitor screen cleaning (with isopropyl alcohol)
- PC case exterior
- Keyboard surface
